

TERRANOVA PAPERS

TERRANOVA PAPERS, S.A.

Ctra. De Carme, Km1 – 08787 La Pobla de Claramunt
Barcelona – Spain VAT Nr: ESA65387375

PRODUCT STATEMENT

Herewith, TERRANOVA PAPERS S.A. confirms that all filter papers mentioned below are produced under compliance of International Standards for safety and hygiene for packaging materials intended to come into contact with food for hot beverage applications.

The products:

• **TERRAFILT NHS (Non Heat Sealable grades)**

are based on virgin cellulose / abaca fibers and do not contain any synthetic fibers. TERRAFILT NHS grades are certified in accordance with standard EN 13432 for compostability.

• **TERRAFILT HS (Heat Sealable grades)**

are based on a blend of virgin cellulose / abaca fibers and contain synthetic fibers such as polypropylene or polyethylene. These synthetic fibers are used to seal the tea bag.

There is currently concern in the market about products that could contain plastic and are not compostable, this concern has led us to develop a new family of products that we have called COMPOFILT.

• **COMPOFILT (Compostable Heat Sealable grades)**

are based on a blend of virgin cellulose / abaca fiber and polylactic acid (PLA), a heat sealable material that comes from vegetal origin, and which replaces the synthetic fibre.

COMPOFILT grades are certified in accordance with EN 13432 standard and are approved to display the following logos.

We expressly confirm that we do not use any PET or Nylon in any of our filter paper products.
